

## Turf - What To Consider

Turf is a popular product for laying down a lawn quickly.

Not all turf is the same.

Pick the right turf product to suit your requirements.

Things to consider are:

How will you use your lawn?

What is your garden like? wet/dry? sunny/shaded?

How much time do you have for maintenance?

How will you use your lawn?

If you are laying turf for your garden, and you have pets and children at home, look for a turf that is hard wearing.

Jubilee Turf is perfect for busy, active gardens that will endure repeated use. Whether from kids playing football or dogs running on it.

Species Rich Turf

If you want a low maintenance lawn but hate the idea of artificial grass, why not consider our species rich turf?

It only needs mowing every 2-3 weeks and will not only give you a beautiful patch to relax and play in – it will be a great support for local wildlife.

Species Rich Turf contains a mix of slow growing grass and low growing wildflowers. It's eco-friendly, low maintenance and very beautiful

If your garden is quite shaded in places, you might want to invest in a specialist turf such as “Shadesman”. Shadesman is better at coping with lower light conditions than jubilee turf and is less likely to become paled or weak in the shade.
