## Meadowmat flowering times

## **Traditional Meadowmat**

Picture yourself knee high in wildflowers and grasses and surrounded by summer insects. This is the feeling evoked by Traditional Meadowmat.

Traditional Meadowmat is a blend of 34 native wildflowers and grasses typically found in an old fashioned hay meadow.

Ideal for a sunny spot where a low maintenance and lots of biodiversity can combine to create a relaxed feel. Prefer a more manicured look? Keeping the edges trimmed and mowing paths through your Traditional Meadowmat gives a more formal appearance. Flowering times vary according to weather conditions, microclimate, plant species and time of installation. To guarantee summer flowers, install before the end of March. This allows plants to settle their roots and grow flowering stems.
