

# Harrowden Titan Seed

- **Available from** [www.turfonline.co.uk](http://www.turfonline.co.uk)
- **Standard Size** 0.9kg Bag
- **Sowing Rate**

*Over seeding*  
15g per square metre. 60m<sup>2</sup> coverage..

*Establishing a new lawn*  
30g per square metre. 30m<sup>2</sup> coverage.
- **Growth**

Harrowden Titan seed is ideal for repairing an existing Titan lawn. The use of Festuca arundinacae and Poa pratensis creates a medium textured low maintenance lawn with excellent drought tolerance once established. Titan seed can also be used for growing a hard wearing drought tolerant lawn from scratch. Titans deep rooting ability helps with soil stabilisation, facilitates carbon capture in the soil and provides resistance to heat and drought. Titan seed can be slow to germinate and is best sown between March and September when soils are warmer.
- **Typical Seed Mixture**

70% Festuca arundinacae  
20% Poa pratensis  
10% Festuca trichophylla
- **Uses**

Dry or shaded landscaped areas  
Commercial landscaping  
Domestic lawns  
Hardwearing amenity areas  
Urban Areas  
Slopes

**Titan offers high drought and good shade tolerance. It's slow growing nature requires less mowing and less water once established.**

## Features

- Extremely high drought tolerance\*
- Good shade tolerance
- Deep rooting helps stabilise soil
- Deep green colour that is impassive to climate change
- Low maintenance requiring less mowing than a conventional ryegrass turf.
- Compatible with most growing mediums found throughout UK.

*\*Titan gains drought tolerance over time. Titan will require regular watering until well established.*
